

SUN LIFE PROSPERITY BOND FUND

This KEY FEATURES DOCUMENT (KFD) is designed to highlight what HSBC considers the key points you should know before you invest. It does not constitute an offer to sell or distribute securities and is made available for information purposes only. HSBC does not warrant the accuracy of the information contained herein and the reader must verify the information directly from the Fund Manager itself. Please refer to the DISCLAIMER on page 3 of this document. This should be read along with the Fund Prospectus.

PRODUCT DETAILS

Low to Medium Risk *

- A fund is a pooled investment vehicle which :
 - gives investors access to the financial markets
 - pools your money with other investors
 - is managed by an Investment Manager who maintains the fund's portfolio and makes decision about what assets to buy and when to sell them
- A bond fund is invested in fixed income investments or bonds. These bonds, which are issued by governments and corporations, pay fixed coupons. Since the interest returns of these instruments are predetermined, they are more conservative than stocks. However, the returns on the fund itself are not predetermined or fixed.
- The objective of the Sun Life Prosperity Bond Fund (Fund) is to provide long-term capital preservation through investment in a diversified portfolio of fixed-income securities issued and guaranteed by the Philippine Government as well as debt papers aggregating below average risk issued by prime Philippine companies.
- The Fund aims to perform better than the 91-day Treasury Bill.
- The Fund uses the Fair Market valuation method to value its assets / securities consistent with International Accounting Standard (IAS) 39. The Net Asset Value per Share (NAVPS) as of the close of business on any day, shall be the quotient obtained by dividing the value of the assets of the Fund less the liabilities by the total number of shares outstanding at such close. Fair Market valuation requires asset be valued on actual day-end market prices plus accrued interest. Unlike the accrual or amortised trade shares of participation in the Fund at their true current worth on the market. This enables investors to enjoy the full earnings potential of the asset class.
- The Net Asset Value per Share (NAVPS) of the Fund is net of taxes and management fees.

Fund Manager	Sunlife Asset Management Company, Inc.
Fund Structure	Mutual Fund
Base Currency	Philippine Peso (PHP)
Launch Date	05 April 2000
Valuation Methodology	Fair Market Valuation (in compliance with IAS39)
Minimum Holding Period	N.A.
Minimum Investor Type	Cautious

BENEFITS of INVESTING in a FUND :

- **Professional Management.** The Fund is administered by a team of fund managers, who make the day-to-day investment decisions.
- **Instant Diversification.** The Fund is invested in a portfolio of securities.
- **Liquidity.** Units of participations can be bought and sold at any time, subject to the minimum holding period.
- **Affordable Investment Size.** Low minimum and incremental investment amount.

RISKS INVOLVED in INVESTING in the FUND :

- **There is no guaranteed minimum return.** Past performance should not be taken as an indication of future results.
- **The Fund and participations in the Fund are not capital-protected.** Since this is a trust product, any loss incurred or income derived therefrom is for the account of the investor. Participations in the Fund are not obligations of HSBC and/or Sun Life Asset Management Company Inc., and are not insured by the Philippine Deposit Insurance Corporation (PDIC).
- **The Fund has no fixed maturity date.**
- **Investment in the Fund does not constitute a deposit.** It will entail a Trust relationship governed by a Trust Agreement between the bank and the client.
- If the Fund you are investing in has a higher proportion of long-term securities, during times of volatility, it will be subject to larger price movements.
- **Management Risk.** The Fund is subject to management risk because they are actively managed investment portfolios. The investment manager will apply investment techniques and risk analysis in making portfolio decisions, however, there are no guarantees that these will produce the intended results.
- **Interest Rate Risk.** Changes in market interest rates will affect the value of the underlying assets and the Fund NAVPS either positively or negatively. In general, there is an inverse relationship between interest rates and bond prices. If interest rate goes up, current outstanding bonds in the market become less attractive, causing their prices to go down and vice versa. The NAVPS is based on bond prices in the Fund. Thus if bond prices drop, the NAVPS will go down as well.
- **Market Risk.** Many other factors can affect the value of the Fund assets, including socio-economic, political and investment conditions, which can cause the NAVPS to fluctuate particularly in the short-term.
- **Inflation Risk.** The rate of inflation may be higher than the rate of return on your investment.
- **Liquidity Risk.** There is financial risk involved should the Fund be unable to sell or convert assets into cash quickly or in instances where conversion to cash is possible but at a loss.
- **Credit Risk.** Issuers of underlying securities may default. If this happens, the price of the security will decline thus affecting the NAVPS of the Fund.

INVESTOR COMMITMENT

The Fund aims to provide moderate capital and income growth over a period of time. It is suitable for investors who:

- have an investment time horizon of around two (2) to three (3) years;
- want a reduced risk profile;
- understand the risks outlined above and are willing and able to take on these risks; are comfortable with short-term fluctuations in the value of their units of participations which, upon redemption, may be worth more or worth less than the original amount invested.

OTHERS

- Financial reports are provided by HSBC Manila Trust Department on a quarterly basis.
- Publication of prices: Subscription and redemption prices are published daily in the Business World, Stock Market Section and in www.sunlife.com.ph. Investors are advised that such published prices are for information only. HSBC does not accept responsibility for any error in publication or for omission of publication of price.

*** Product Risk Level : Low to Medium**

- The price volatility of the product is low to medium, and some market monitoring is required to control relevant risks of the product.
- This product may be suitable for investors who are happy to accept low to medium level of investment risk.

ABOUT THE FUND MANAGER

MARKET REVIEW

Peso government bond yields rose towards the end of the month amid heightened risk aversion in the wake of recent downgrades in European sovereign credits and concerns over rising domestic inflation and growing fiscal slippage. April inflation of 4.4% matched the rise in March and was blamed on higher food and fuel prices.

Notably, the budget deficit for 1Q2010 soared to Ps134.2 billion and surpassed the Ps110.9 billion target for the quarter. The robust tax revenue performance in March simply failed to cope up with the 25% y-o-y increase in government expenditures.

The Bangko Sentral kept its policy rates steady but further slashed its rediscounting facility to Ps20 billion from Ps40 billion. It also upgraded its 2010 inflation forecast from 4.5% to 5.1% and fueled speculations that a policy rate hike is in the offing. In passing, JP Morgan stated in a recent report that the Philippines is behind the tightening curve and urged a shift to monetary tightening.

Meanwhile, the Bureau of the Treasury raised a total of US\$500 million from the sale of fixed rate multi-currency OFW bonds. Some US\$400 million was raised from the sale of US dollar-denominated bonds and US\$100 million through euro-denominated bonds.

Return on Investment (ROI) slipped to 4.94% y-o-y from 5.26% y-o-y in March. However, Net Asset Value per Share (NAVPS) was virtually flat at Ps2.0812 compared to Ps2.0816 for the same period.

OUTLOOK

Interest rates could come under increasing pressure as political risk premium ratchets up as the May 10 elections draw near. Investor preference is expected to shift to cash and near-cash investments amid uncertainties over the conduct and outcome of elections. Accrual investments such as the Special Deposit Accounts (SDAs) are the preferred safe haven of risk-averse investors over private corporate issues. Case in point, SDA placements rose by Ps248 billion in the 1st quarter this year.

Invest wisely. Important information about the Sun Life Prosperity Funds is contained in their prospectuses, which may be obtained from duly authorized Sun Life Mutual Fund Distributors. Read the prospectus carefully before investing. Share values and thus yields will fluctuate. Please note that return statistics only indicate past performance over the periods indicated and not future performance.
