

Risk of Installing Apps

With all of the cyber-attacks targeting companies and individuals, you'd ask yourself, "Are downloading apps safe?" The answer is - Yes. As long as you take precaution when installing apps on your device. Downloading apps from untrusted sources may contain malware and put your device and privacy at risk.

Keep your mobile and laptop safe:

- Download your applications from reputable sources or official app stores only.
- Verify the authenticity of the application and its developer before installing anything.
- Don't click links from unsolicited senders.
- Install an anti-virus program in your devices and keep it updated.
- Always have the latest version of your software or Operating System.
